Add to List

Share

Given an array of integers `arr` and an integer `k`. Find the *least number of unique integers* after removing **exactly** `k` elements.

### Example 1:

Input: `arr = [5,5,4]`, `k = 1`

Output: 1

Explanation: Remove the single 4, only 5 is left.

### Example 2:

Input: `arr = [4,3,1,1,3,3,2]`, `k = 3`

Output: 2

Explanation: Remove 4, 2 and either one of the two 1s or three 3s. 1 and 3 will be left.

### Constraints:

- $1 \leq \text{arr.length} \leq 10^5$
- $1 \leq \text{arr}[i] \leq 10^9$
- $0 \leq k \leq \text{arr.length}$
